

Practical 2 :- Encryption and Decryption

```
#include <stdio.h>

#include <string.h>

void encrypt(char str[]) {
    for (int i = 0; str[i] != '\0'; i++) {
        str[i] = str[i] + 3;
    }
}

void decrypt(char str[]) {
    for (int i = 0; str[i] != '\0'; i++) {
        str[i] = str[i] - 3;
    }
}

int main() {
    char str[100];
    int choice;

    printf("Enter the string: ");
    scanf("%s", str); // siddhi
    printf("1. Encrypt\n");
    printf("2. Decrypt\n");
    printf("Enter your choice: ");
    scanf("%d", &choice);
    switch (choice) {
        case 1:
```

```
    encrypt(str);  
    printf("Encrypted string: %s\n", str);  
    break;  
case 2:  
    decrypt(str);  
    printf("Decrypted string: %s\n", str);  
    break;  
default:  
    printf("Invalid choice.\n");  
}  
return 0;  
}
```
