

Practical 1A: design and implement for the insecurity of default password

```
#include <stdio.h>

#include <string.h>

int main()
{
    char username[15];
    char password[12];
    printf("Enter your username:\n");
    scanf("%s", username);
    printf("Enter your password:\n");
    scanf("%s", password);
    if (strcmp(username, "Siddhi") == 0)
    {
        if (strcmp(password, "Siddhi0613") == 0)
        {
            printf("\nWelcome. Login Success!");
        }
        else
        {
            printf("\nWrong password");
        }
    }
    else
    {
        printf("\nUser doesn't exist");
    }
    return 0;
}
```
